Descriptive Process Model -An Example

This example of a **Descriptive Process Model** demonstrates a specific business situation (collaboration) between a customer, an online shop and a supplier. The purpose of this model is to describe a "processing of an order" process, where the customer's and supplier's process details are hidden. It is important to notice the sequence of process activities is represented with solid arrows (A **sequence flow** element). In The case of interactions between processes, only **message flows** can be used. The **dark blue callouts** are not part of BPMN and represent simplified explanations of each BPMN element in the context of the diagram.
